mike.skridulis@efiglobal.com

Professional Summary:

Michael “Mike” Skridulis currently acts as the Director of Site Investigation and Remediation for EFI Global’s (EFI) Environmental Services Division with over 20 years of experience in the management and implementation of environmental due diligence, site assessment, remediation of environmentally impacted soil, groundwater, and soil vapor, National Environmental Policy Act (NEPA) and Environmental Planning, and a demonstrated track record in driving complex projects to regulatory agency closure. He also sits as the Environmental Service Line Principal for EFI’s Southwest Division and Program Manager for EFI’s National Phase II Environmental Site Assessment (ESA) Program which utilizes a multi-national team of environmental professionals to facilitate site investigation projects nationwide. He holds a varied and extensive history in assessing environmental conditions, evaluating environmental liability and risk, development of corrective action, and execution of proposed resolutions. He serves as the direct point contact and liaison with and between national clientele, responsible parties, site owners and potential purchasers, environmental risk management representatives, attorneys at law, regulatory agencies, and subject matter experts. He has extensive experience understanding the environmental challenges of private, public, and municipal clientele both locally and on a national scale. Mr. Skridulis is familiar with navigating environmental concerns for clients in a variety of industries including but not limited to property development; property management; lending; energy sectors; commercial real estate; city and county municipal; State and Federal; housing authority and affordable housing; oil and gas (up, mid, and downstream); builders; and general contractors.

Mr. Skridulis is competent with due diligence, investigation, and remediation of petroleum products and chlorinated solvents; navigation of State and Federal regulatory and Voluntary Cleanup programs; vapor intrusion and mitigation; solid waste remediation; construction site impacted media management; proposal and cost estimating, work plan and sampling plan development, and report preparation. He also serves as a senior project reviewer and senior mentor for junior staff.
